

Non-native Plants of Delaware

William A. McAvoy

Delaware Natural Heritage and Endangered Species Program

Delaware Division of Fish and Wildlife

April 2011

Non-native: A species that is not native to North America (north of Mexico). Non-native species are thought to have been introduced by humans, primarily through agricultural or horticultural practices. These species have become established in Delaware and are reproducing as if native (i.e., naturalized).

Adventive (highlighted in bold): A species native to North America, but not to Delaware that is now found growing in Delaware outside of its natural range. Adventive species are not considered to be part of Delaware's native flora. These species usually arrive due to the human-caused breakdown of natural barriers to dispersal. Adventive species also include plants that have been introduced, or intentionally planted in Delaware and are now escaping and surviving without cultivation.

Invasive: A species that causes environmental harm. Invasive species are very aggressive and out-compete and displace native flora and fauna.

Invasive Watchlist: Invasive species that are not yet well established in Delaware but have the potential to become abundant and widely distributed throughout the state. Invasive Watchlist species are often a priority for concern in surrounding states.

Scientific Name	Common Name	Invasive	Invasive Watchlist
<i>Abutilon theophrasti</i>	velvet-leaf		
<i>Acer nigrum</i>	black maple		
<i>Acer palmatum</i>	Japanese maple		X
<i>Acer platanoides</i>	Norway maple	X	
<i>Acer pseudoplatanus</i>	sycamore maple		
<i>Achillea filipendulina</i>	fernleaf yarrow		
<i>Achillea millefolium</i>	yarrow		
<i>Acorus calamus</i>	European sweetflag	X	
<i>Aegopodium podagraria</i>	Bishops goutweed		
<i>Aethusa cynapium</i>	fool's-parsley		
<i>Agastache foeniculum</i>	blue giant-hyssop
